EXPERIENCE

DESIGNATION, Chicago — *UX/UI Designer*

July 2016 - November 2016

I collaborated with design teams to build human-centered web products based on research and iterative rounds of testing. I gained a solid UX/UI skillset while working over 70 hours per week utilizing tools such as Adobe Creative Suite, Sketch and InVision. I had the pleasure of working closely with design teams to enhance the user experience of two client projects.

NWTN - *Research, UX design*

My design team and I built a high-fidelity prototype of 60 screens and annotated wireframes for a concussion detection app.

Rent Application - *Research, UX design*

We created a complete remake of the current structural interface of a rental application management site. The client was thrilled and adopted our remake immediately.

General Assembly, San Francisco — *Full-Stack Web Development*

March 2016 - June 2016

I learned many concepts and technologies in a fast paced, immersive environment. I fulfilled front-end and back-end roles working alongside other developers. As a result, I complete four full-stack web apps, each in week long sprints.

To-Doodling

Ruby on Rails to-do web app

PlanTastic

Ruby on Rails event planning web app

Handprint

AngularJS travel guide web app

Anifull

Animal fact app built with MongoDB

Just Hair, Eugene, Oregon — *Hairstylist*

March 2015 - July 2016

Gervais Salon & Day Spa, Eugene, Oregon — *Hairstylist*

March 2013 - January 2015

I completed an intense year long apprenticeship while frequently attending advanced classes in Portland. I challenged myself to grow by joining an in-depth 13 week business development course that increased my client retention by 30 %.
