EXPERIENCE

Will Leather Goods, Eugene, Oregon — *Product Design Intern*
January 2017 - Present

I've gained experience designing physical products, using Illustrator to create high-fidelity tech packs. When I'm not working in the product design realm, I manage our products and blog posts based on Shopify.

DESIGNATION, Chicago — *UX/UI Designer*
July 2016 - November 2016

I collaborated with design teams to build human-centered web products based on research and iterative rounds of testing. I gained a solid UX/UI skillset while working over 70 hours per week utilizing tools such as Adobe Creative Suite, Sketch and Invision. I had the pleasure of working closely with design teams to enhance the user experience of two client projects.

NWTN - *Research, UX design*

My design team and I built a high-fidelity prototype of 60 screens and annotated wireframes for a concussion detection app.

Rent Application - *Research, UX design*

We created a complete remake of the current structural interface of a rental application management site. The client was thrilled and adopted our remake immediately.

General Assembly, San Francisco — *Full-Stack Web Development*
March 2016 - June 2016

I learned many concepts and technologies in a fast paced, immersive environment. I fulfilled front-end and back-end roles working alongside other developers. As a result, I completed four full-stack web apps, each in week long sprints.

To-Doodling
Ruby on Rails to-do web app

PlanTastic
Ruby on Rails event planning web app

Handprint
AngularJS travel guide web app

Anifull
Animal fact app built with MongoDB
